Curriculum Vitae

PROFILE

» Experienced Java Software Engineer & Developer

EXECUTIVE SUMMARY

Highly skilled, experienced and qualified Java Software Engineer & Developer with 11 years' experience working in challenging roles providing full life cycle software development solutions to companies in the financial services, insurance and technology sectors.

Currently, I am a Senior Java Developer at Momentum. Previous roles have included being Java Developer at Telkom, Java Developer at ABSA and Junior Java Developer at TATA Consultancy Services.

I possess strong technical skills capable of designing and engineering software solutions that improve efficiencies, reduce costs, and maximize the technology investment.

I possess excellent business understanding with the ability to analyse business process and requirements into technical specifications. I have a proven track record of managing projects and working with several business departments in developing customised solutions. Strong in-depth knowledge in the Design Analysis and Development of Large Scale, High Performing JAVA, JAVA EE based Enterprise Applications/Complex Software Products, JAVA SE, Object-Oriented Programming, Application Deployment, Developing User Interfaces, Creating Workflow Process, Microservices and Java Programming.

Strong communication, planning and organisational skills, with a strong aptitude to coordinate and deliver service delivery above set standards. Strong ability to motivate and train teams and individuals in order to transfer skills and execute strategies effectively.

PROFESSIONAL EXPERIENCE

Position: Senior Java Developer

PERSONAL DETAILS

B3, Rosewalk Gardens, Rosewalk Street, Hurl Park, Parkmore, Sandton 2196

Email: chramu2003@gmail.com

Cell: +91 95159 93418 / +27 71 379 5668

Gender: Male

PROFESSIONAL SKILLS

- Solutions Design
- Enterprise Architecture Design
- Distributed Systems
- JAVA 6, 8
- EJB
- JAX-WS
- JAX-RS
- IBM MQ
- IBM portal
- Spring Boot
- Spring
- Hibernate
- JPA
- Servlet
- Angular 6, 7, 8
- AngularJS
- JSF
- HTML
- JavaScript
- JSP
- WebSphere
- Tomcat
- WebLogic
- Windows XP, 8, 10, OS X
- IntelliJ
- Eclipse
- NetBeans
- RAD
- IBM MQ Explorer
- Maven
- Ant
- Jenkins
- SVN
- GIT
- Oracle
- DB2
- PL/SQL
- MongoDB
- Agile
- Waterfall

PROFESSIONAL QUALIFICATIONS

- **Master of Computer Applications**, Andhra University, India

PERSONALITY TRAITS

- Strategic, Driven, Innovative, Analytical, Collaborative

- Coordinate with product owner to prepare timeframe for new features/enhancements/bug fixes and setup priority levels of issues/defects.
- Design and develop application code.
- Design data models and create tables.
- Develop and execute unit, integration test cases.
- Deploy the application using Jenkins.
- Provide technical support to production systems.
- Automate deployments using Jenkins and wdra scripts.
- Trained Junior developers.

Project 2: **Work Queue Manager**

Allocation of work from work queues to personal queues and from personal queues to work queues when agents are not available. Update agent status in AWD when required.

- Coordinate with business analyst and application architect to maintain knowledge on all functional requirements and ensure compliance to all architecture standards.
- Coordinate with product owner to prepare timeframe for new features/enhancements/bug fixes and setup priority levels of issues/defects.
- Design and develop application code.
- Design data models and create tables.
- Develop and execute unit, integration test cases.
- Deploy the application using Jenkins.
- Provide technical support to production systems.
- Moved source code from SVN to GIT

Project 3: **EFM**

Manage raw data being submitted by different business units and share parsed data with the supplier for survey.

- Coordinate with business analyst and application architect to maintain knowledge on all functional requirements and ensure compliance to all architecture standards.
- Coordinate with product owner to prepare timeframe for new features/enhancements/bug fixes and setup priority levels of issues/defects.
- Design and develop application code.
- Design data models and create tables.
- Develop and execute unit, integration test cases.
- Deploy the application using Jenkins.
- Provide technical support to production systems.
- Moved source code from SVN to GIT

Project 4: **Voice Of Client**

Parse text files contains survey responses being received from supplier(who does the survey) into tables and share resulted data with other systems.

- Used extensive rest service calls for calling the rest services and storing the data.
- Created self-contained, reusable, and testable modules and components for the Application.
- Developed a search criteria, search based on filters.
- Validating user actions on the client side.
- Developed Restful Web services using Jersey framework.
- Used EJB for business logic implementation.
- Crafted UI Using Angular
